

Visitor management
for events

Master visitor management for your events.

GUIDE Event, a practical and effective solution combining simplicity of use and performance for all your trade shows, conferences, meetings...

• EVENT CREATION

- Creation or importation of one or multiple event on a defined period

Importing lists of visitors :

- Import and associate quickly a visitor to an event via XLS or CSV files
- Complete manually an imported list of visitors

Define the elements of informations :

- Create and manage informations documents for your visitors (description, pictures, access maps...)
- Generate a QR Code to ID your visitors

Transmission of the event :

- Notifications by emails or sms.

• EVENT MANAGEMENT

Different input entries :

- QR code or invitation reading via smartphone or a scanner.
- ID reading (driver's license, passport, etc.) via a document reader
- Search and selection in a list of expected visitors
- On the fly registration

Printing of badges and other documents :

- Manage your different print format linked to an event
- Manage your print automation (instant printing after a QR code reading, after selecting a visitor, etc.)

Consulting your visitor lists

- Immediate access to interactive list of incoming or present visitors
- Browse in real time your visitors' flux on the dashboard with graphs or digital displays
- Search and extract data

• SECURITY

- Management of the profiles and monitoring by the host agents
- Control of incoming, present, entered and exited visitors in real time
- Reading and verification of identity documents.

GUIDE EVENT QR CODE

The GUIDE Event software has a **mobile QR Code scanning application**.

Virtual or printed badges, transmitted by email or sms, are provided with a **QR Code to identify the badge holder** (name, first name, company, dates and name of the event...).

GUIDE Event QR Code allows **reception agents and exhibitors** to scan the QR Codes received by visitors and **use informations**.

GMH2i offers you the different versions of its software, from the single-user version to the intranet version.

All these versions have an ergonomic interface, adapting to any digital media.

- SINGLE-USER VERSION

Easy to install with a wealth of different operating modes, this version will address all your needs without any restrictions.

This version also includes **event creation and management, input and recording of entrances, event history or again badge printing.**

Prerequisites : Operating system (32 or 64 bits): Windows 7, 8, 8.1, 10. Hard disk space : at least 250 MB. RAM : at least a 4 GB. Processor : at least 3 GHz. Microsoft.Net Framework 4.6 minimum. Microsoft Internet Explorer 10 or higher.

- CLIENT-SERVER VERSION

Keeping the same procedures, in a logical development of the single-user version, the client-server version **gives you the opportunity to extend your visitor management to several computers.** These computers are then connected through the same Oracle, SQL server or MySQL database.

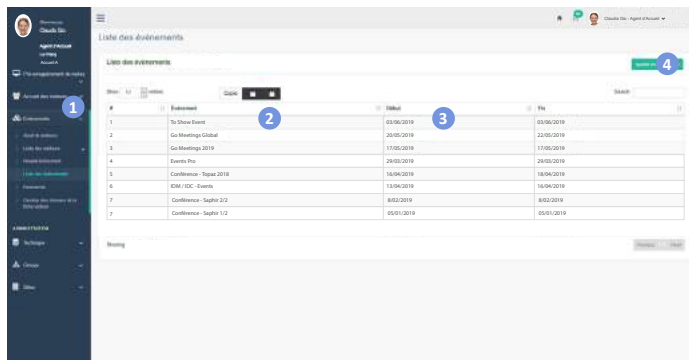

Prerequisites: Identical to the single-user version + drivers for connection to the database (Oracle, Microsoft SQL server) depending on the environment.

- INTRANET / CLOUD VERSION

While maintaining the same interfaces and the same ease of use offer your reception agents the ability to **manage your visitors on all digital media**, such as tablets and smartphones, without all technological constraints.

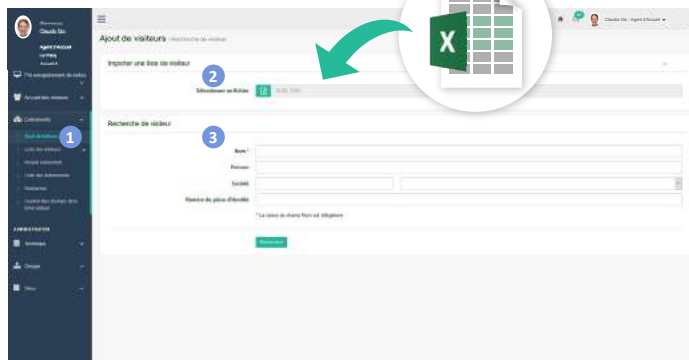

Prerequisites: Browsers : Internet Explorer 10 minimum, Mozilla Firefox 55, Google Chrome 63, Apple Safari 4. Server : Windows Server 2008 R2 minimum. IIS 7.5 minimum. Linux environment, Apache 2.

List of Events

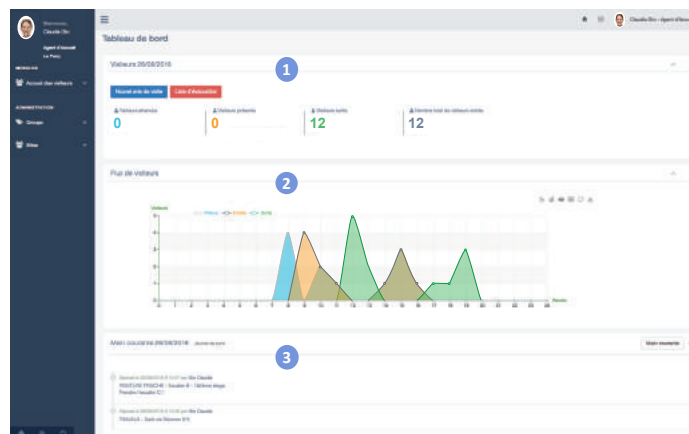

- 1 Menus
- 2 Name of event
- 3 Date of event
- 4 Add of event

Import of visitor list(s)

- 1 Menus
- 2 Importing a visitor list
- 3 Search of visitor

Dashboard

- 1 Daily visitor flow (digital)
- 2 Daily visitor flow (graphic)
- 3 Aperçu de la main courante
